Most Responsible Provider* (MRP): <input type="checkbox"/> SBAR + <input type="checkbox"/> Additional Documentation (e.g. written notes if on-call physician visited site)
	PLACE SBAR in Physician Notes section of chart OR unit MRP communication binder: <input type="checkbox"/> Date: _____ Time: _____

LTCI SP AFTER-HOURS CALL LINE: 1-877-404-2011

To help you feel confident & organized when communicating with the after-hours call physician, please review the following list of common reasons for call, tips & tricks to try before calling, & process reminders.

REMINDER: This call group only covers residents in long-term care (not assisted living)

BEFORE YOU CALL

Ensure you are organized, prepared, & certain the call is necessary

Ensure the SBAR is complete & all relevant info is included

Ensure you have the resident's chart, MAR, MOST, med list, & any clinical order sets needed

Palliative Care Orders

If you suspect that a resident may be nearing end of life, please make every effort to obtain palliative orders in advance (i.e. during the day), to be activated when required. If a resident's condition changes unexpectedly, or the resident is actively/imminently dying without palliative orders, call the after-hours physician for support or orders.

Prior to calling, make sure you have your care home's palliative or end-of-life order set on hand, and your completed SBAR includes information on:

- when the changes started
- any recent illnesses
- medication changes or falls
- specific new symptoms that need to be addressed (eg. pain, dyspnea, restlessness)

Urinary Concerns

Before calling regarding a urinary concern, please remember that **Choosing Wisely Canada** states that **most older people should NOT be tested (including no urine dipsticks) or treated for a UTI unless they meet the minimum criteria for a UTI (below).**

MINIMUM CRITERIA FOR UTI (MODIFIED LOEB CRITERIA)	
Non-catheterized	Acute dysuria or 2 or more of: fever, new/worsening urgency, frequency, suprapubic pain, gross hematuria, flank pain, urinary incontinence
Catheterized	Any 1 of following after alternate explanations are excluded: fever, flank pain, shaking chills, new onset delirium

Ensure a call is necessary:

- consult the [Island Health guideline on Care of the Resident with a Suspected Urinary Tract Infection in LTC](#), which outlines clinical assessment criteria and nursing interventions to treat associated symptoms, including offering sufficient fluids, toileting regularly, analgesics as needed, and other strategies
- review the [Care and Management of Patients with Urinary Catheters: Clinical Resource Guide](#)

Pain Management

If a resident is experiencing uncontrolled pain and all other PRN medications and non-pharmacological approaches have been attempted/are insufficient, call the after-hours physician.

Ensure your completed SBAR includes

- a focused pain assessment
- an assessment of relevant systems
- review the resident's chart for pertinent medical history and any relevant diagnoses
- a brief description of the pain treatment to date and its effectiveness, as well as what non-pharmacological nursing interventions have already been tried

Using the After-Hours SBAR Form When A Call Is Necessary: Complete, Call, Communicate

1 Complete

The entire After-Hours SBAR form as appropriate; if using a resident label, black out/redact all information aside from resident's name, DOB, PHN, & MRP

2 Call

The SP After-Hours Call Line at 1-877-404-2011; dispatch will either connect you directly to the physician on-call, or phone you back shortly

3 Communicate

Complete "Physician Response Notes" section of SBAR; Fax completed SBAR form to MRP & On-Call Physician; place SBAR in resident's chart
